

SISTIM User's and Operator's Manual Information

1. The two new SISTIM version's 6.3.0.2 and 6.3.1.0 have the following new functionality:
 - Improved Map capability allowing units and FS geometries to be viewed
 - Crusader Weapon simulation and OPFAC logic
 - JVMF Release 5 message set
 - Drivers for the new video graphics card used in upgraded CCU2
 - Support to mount and copy files using Unix commands for Jazz and new memory cards.
2. Contained on this CD and also accessed from the SISTIM Application Help Menu are 2 Manuals that will assist in the operation and use of SISTIM. The manuals complement each other by providing both a technical and an operational view of the SISTIM software.
3. Both updated versions are still compatible with AFATDS 98.

Operator's Manual (Training Manual on Help Menu) –

File name - sistim_operator_manual_6_3_X_X

The Operator's Manual is designed to provide the information in a task-based manner that will train the necessary steps to load; start, setup communication, Units and auto generate and execute scenarios. The manual is divided into chapters that provide a general overview of capabilities and functions then, logically steps through the normal operation of the software. The manual contains the following chapters:
