

UPL's Briefing

You have four major responsibilities during the collection procedure:

1. Initial the specimen bottle label verifying your personal data is correct
2. Provide the bottle half full.
3. Keep specimen bottle in full sight until sealed with tamper evident tape.
4. Sign your payroll signature to verify that the specimen was yours and you watch it be sealed by the UPL with tamper evident tape and placed in the collection box.

Your urine specimen will be provided in a labeled plastic bottle (an optional wide mouth collection cup is available for females).

Do not accept a bottle that does not have a completed label affixed with your correct DODID/SSN and today's date.

Collection of the specimen will be conducted using direct observation in full view of an observer. Do not go to the UPL station until you feel you are ready to provide the bottle half full.

If you are unable to provide a specimen or an adequate quantity of urine, you will be held in the holding area until you are able to provide a specimen. You will be provided an adequate amount of liquid to help facilitate the collection process. You will not be released from duty today until you have provided a proper specimen.

1. You will provide your military ID card. If you do not have your military ID card or other photo identification, the commander will be called to verify your identification.
2. Remove excess outer garments such as ACU jackets and coats or PT tops.
3. You will initial the bottle label only after you verify your DODID/SSN and date on the label.
 - a. Your full name, SSN and date on the Unit Urinalysis Ledger.
 - b. Your DODID/SSN on DD Form 2624.

Provide a urine specimen under direct observation.

Then sign your payroll signature on the Unit Urinalysis Ledger verifying that the urine specimen provided was yours, the specimen was sealed with tamper evident tape and was placed into the collection box.

Note: We do not need to know if you are taking prescription medications. If your specimen result comes back positive from the lab for a drug that could have been a result of prescription medication, a medical doctor will review the result before any actions are taken. The doctor will review your medical record, any prescriptions from outside providers, and possibly interview you, prior to making a medical determination. If the doctor determines the drug positive was a result of valid prescription medication, then no actions will be taken against you.

Are there any questions? Any questions about the collection procedure will be directed towards your observer or myself.
